                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      654
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             99
                                                                                                                                                                                                                           The gene (AAT60739) encoding 1gG1 (AAW10550) can be subjected to sitedirected mutagenesis in order to introduce one or more N-linked glycan addition sites into the 1gG1 molecule (see also AAW10551). Eukaryotic host cells co-transfected with a vector carrying the the mutated 1gG1 gene and with a vector that expresses an alphatia. Stucosyltransferase capable of attaching sialy1-Le(x) groups at the glycosylation sites of the antibody molecule can be used in the prodn. of sialy1-Le(x)-modified antibody. Such an antibody has therapeutic applns, e.g. in minimising inflammation and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to novel transgenic nonhuman mammals, particularly rodents, comprising two human immunoglobulin (Ig) loci, where one of two the human immunoglobulin loci is a human heavy chain locus and the other locus is a human light chain locus, and where only one of the loci is of a transchromosome. The transgenic animals are useful for generating a number of B-cell expressing human antibody sequences. They are also useful for producing rearranged immunoglobulin sequences, producing human antibody display libraries, and generating a human sequence antibody that binds to a predetermined antigen. The produced antibodies are useful for treating immune-related disorders. The present sequence represents a plasmid used in the construction of expression vectors for human IgG.

100000000 M-1 for binding to a predetermined human antigen. The present sequence represents the kappa light chain plasmid pCMY-96 which includes the human gammal constant region and polyadamylation site. Anti-CD4 antibodies may be used in therapeutic and diagnostic applications, especially for the treatment of human diseases. These antibodies reduce activity of CD4 cells and reduce undesirable auctimmune reactions, inflammatory response and transplant rejection. Transpant and and activity of CD4 cells and reduce undesirable auctimmune reactions, undergoing isotype switching. These animals are produce a first is sorypes by undergoing isotype switching. These animals produce a first ig type that is necessary for antigen-stimulated B-cell maturation and can serious and produce one or more subsequent heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   63

The present sequence is used in the course of the specification. The specification describes a human antibodies which specifically bind to human cytocoxic T lymphocyte associated antigen-4 (CTLM-4). Such antibodies are used in methods for inducing, augmenting or prolonging an immune response to an antigen in a patient, where the antibodies are block binding of human CTLM-4 to human B7 ligands. The antibodies are also useful for treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer. A polyvalent or polyclonal antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia gravis and lupus erythematosus, multiple sclerosis, insulin-dependent contents.
                                                                                                                                                                                                                              Novel human sequence antibody that binds to human cytotoxic T lymphocyte associated antigen-4, useful for inducing, augmenting prolonging immune response to antigen or for suppressing immune response in patient

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents the gammal heavy chain plasmid, pCG7-96, which includes the human gammal constant region and polyadenylation site.

The plasmid is used in the construction of minigenes for expression of includes the human gammal constant constant and secretically a pecification describes transgenic non-human animals, especially a mouse, which are capable of producing a human heterologous antibodies of multiple isotypes by undergoing isotype switching. The transgenic animals havy and light chain transgenes are capable of functionally rearranging a heterologous diversity (D) gene in a heavy chain transgene comprising at least one V, D and J gene segment, and one constant region gene segment. The immunoglobulin (Ig) light chain cransgene comprises at least one V and J gene segment, and one constant region gene segment. The immunoglobulin (Ig) light chain cransgene comprises at least one V and J gene segment, and one constant region gene segment and one constant regions are used to revent efflux of neutrophils from animal. The antibody can be used to prevent efflux of neutrophils from antibodies are used to refation of transplanted organs. The antibodies can reduce undesirable autoimmune reactions, inflammatory responses and rejection of transplanted organs. The antibodies can reduce tissue damage and prolong survival in animal models of acute adult respiratory distress syndrome (ARDS) and anti-IL-8 antibodies can also be used for a asthma) and cystic fibrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      549

pBAG101 was designed to carry genomic DNA encoding the human IgG4 heavy chain constant region. The IgG4 DNA was isolated by polymerase chain reaction from human placental DNA using the primer sequences given in AAQ30907-08. The amplification product of this reaction was approx. 2109 bp. This fragment was inserted into EcoRS linearised pNN03 (see also AAQ3056) to give the intermediate plasmid pBAG101.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    GTCAAGGACTACTTCCCCGAACCGGTGACGGTGTCGTGGAACTCAGGCGCCCTGACCAGC

                                                                                                                                                This sequence encodes a CD4-gamma2 chimeric heavy chain homodimer.

0.7 kb fragment, and cloned into M13mp18 forming M13mp18 (CD4). This was linearised with Pst1, and the SacII(flush) Pst1 fragment from Dbr gamma2 containing human gamma2 heavy chain (CH1 excn) isolated and ligated to the M13mp18 (CD4) vector. Resulting recombinants were then Streened by restriction analysis for the presence of both CD4 and CH1 which occur in trandem CD4 (EcoRI/Stu1) -CH1 (SacI (flush)/Pst1). CH1 which occur in trandem CD4 (EcoRI/Stu1) -CH1 (SacI (flush)/Pst1). CH1 which occur in trandem CD4 (EcoRI/Stu1) -CH1 (SacI (flush)/Pst1). CH1 heavy chain sequences in frame. The resulting chimeric DNA to the CH1 domain of heavy chain, plaques containing the V1V2 domains of CD4 fused with the correct sequence were then grown in Td1 cells and Rf DNA isolated from the cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   868 | GGACTCTACTCCCTCAGCAGCGTGGCCTTCTTCTTCTTCGGCACCAGACC 927

This sequence represents the CD4-IgG2 chimeric heavy chain nucleotide sequence from the CD4-IgG2 chimeric heterotetramer. The invention relates to an immunoconjugate comprising a cytotoxic radionuclide and a heterotetramer of two heavy chains and two light chains. The cytotoxic radionuclide is linked to either the heavy chains or the light chains, or considerable of the constant of the heavy chains are chimeric CD4-Ig (immunoglobulin) G2 chains encoded by cector CD4-kappa chains are chimeric CD4-kappa chains are con-polymorphic cells surface glycoprotein that is expressed on the surface of helper T lymphocytes, cells of the monocyte/macrophage lineage and dendritic cells. CD4 associates with major histocompatibility complex mediate efficient cellular immune response interactions. In humans CD4 is the target of interaction with the human immunodeficiency virus HIV. The immunoconjugate is used to kill cells infected with HIV, and for treating conservation in the immunoconjugate is used to diffection, and for assessing efficiency of treatments). The immunoconjugate is also used to determine the HIV consequence in the response in the surface of the inference of envelope glycoprotein burden, once determined, this information is used in the result of the consequence of the consequenc
                                                                                                                                                                                                                                                           CD4-1gG2 chimeric heavy chain heterotetramer; immunoconjugate; treatment; cytotoxic radionuclide; cell surface glycoprotein; prevent; infection; cellular immune response interaction mediator; HIV interaction; staging; prognosis; envelope glycoprotein burden; human; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CD4-19120 interaction is essential for infection). The heterotetramers are assembled intracellularly and secreted efficiently from mammalian cells, allowing high recovery and purification from the culture medium. They have longer half-life in serum and greater avidity than heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of HIV (since the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New immunoconjugate, used to treat, prevent or image human immune deficiency virus infection, comprises radionuclide attached to heterotetramer of CD4-immunoglobulin chimeras
                                                                                                                                                                                                               CD4-1gG2 chimeric heterotetramer heavy chain nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in the staging and prognosis of HIV infected patients. The immunoconjugate should be active against all strains of HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2482 BP; 559 A; 812 C; 676 G; 435 T; 0 other;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2

Sequence 370, Application US/09042353

Patent No. 6255458

GENERAL INFORMATION:
APPLICANT: Lonberg, Nils

APPLICANT: KAY, KObert M.
TITLE OF INVENTION: Transgenic No. 6255458-Human Animals for TITLE OF INVENTION: Producing Heterologous Antibodies
NUMBER OF SEQUENCES: 421

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SOFTWARE: Patentin Release #1.0, Version #1.30
